

Techni-Ice Dry Ice Pack Instructions

1. Place the Flat sheet of Techni ice sheet in Warm water and Gently scrunch sheet while completely submersed in water to release air bubbles. Allow each sheet to unfold while still submersed to absorb water.

Please Note - The sheet of Techni ice should be completely submersed during the entire process.

2. After a Few hours the Sheet of Techni ice will expand to a fully hydrated pack, with each cell about 3cm thick .

3. If you find that some lazy cells which have not expanded, gently massage the cells and if required increase the temperature of water by adding some hot water.

4. Once all the cells are Well Hydrated, Remove them from the water and towel dry thoroughly. This ensures that any excess water does not become ice on the outside of sheet during the freezing process.

5. Your Techni Ice is ready to freeze.

6. If you find Techniice a bit slimy , This is just an indication that the sheet needs more water , So for the Next 3 uses we recommend that the Techni ice sheet be resoaked in water for around 1 hour for the hydration process to complete

TO FREEZE: Techni Ice should be frozen for at least 24 hours, with the freezer set at the coldest setting. For best results leave Techni Ice in the freezer 2-3 days, as it is drops 5 degrees per day until it reaches your freezer temperature
